Object-oriented programming (OOP) is a programming paradigm based on the concept of "objects", which may contain data, in the form of fields, often known as attributes; and code, in the form of procedures, often known as methods. A feature of objects is that an object's procedures can access and often modify the data fields of the object with which they are associated (objects have a notion of ...

VCL versus VisualCLX. As you saw in Chapter 4, "Core Library Classes," Delphi has two visual class libraries: the cross-platform library (CLX) alongside the traditional Windows library (VCL). There are certainly many differences, even in the use of the RTL and code library classes, between developing programs specifically for Windows or with a cross-platform attitude, but the differences are ...
